Honda
SENSING

Lane Keeping Assist System (LKAS)

Provides steering input to help keep the vehicle in the middle of a detected lane and provides audible and visual alerts if the vehicle is detected drifting out of its lane.

Lane Departure Warning (LDW)

When the vehicle enters the warning area, the LDW alerts you with slight steering wheel vibration as well as a warning display.

Forward Collision Warning (FCW)

Alerts you when it detects the possibility of your vehicle colliding with the vehicle in front of yours.

Collision Mitigation Braking System (CMBS)

CMBS is designed to alert you when a potential front collision is determined, as well as to reduce your vehicle speed to help minimise collision severity when a collision is deemed unavoidable.

Road Departure Mitigation System (RDMS)

Alerts and helps to assist you when the system detects a possibility of your vehicle unintentionally crossing over detected lane markings.

Adaptive Cruise Control (ACC) with Low Speed Follow (LSF)

Helps maintain a constant vehicle speed and a set following interval behind a vehicle detected ahead of yours and, if the detected vehicle comes to a stop, can decelerate and stop your vehicle.

High Beam Support System (HBSS)*

Automatically changes your headlights from low to high on a clear road, and then back to low beam when an oncoming vehicle is detected.

⁺Honda SENSING technologies are driver-assist technologies and should not be used in place of safe driving practices. Drivers should continue to monitor the road at all times. The accuracy and operation of Honda SENSING technologies may vary based on weather, speed, traffic, road conditions, markings and other factors. Honda Sensing suite available from VTi grades and above. Features within the suite may vary per grade.
